

Priorities	Status Indicators:	Expectation	Goal Type
Essential	DONE	Certain	Confirmed Dapper goal
High	On track, all OK	Probable	Considered Dapper Goal
Medium	Slightly behind schedule	Unlikely	Not guaranteed for Dapper
Low	Blocked / needs mgmt input	Deferred	

Prio.	Was	Now	Name	Assign	Days	Dapper Development Status Update: 09 March 2006
ajmitch						Not present – goal deferred.
Medium	Deferred	Deferred	selinux	ajmitch	?	Added as a Dapper goal. Was: Due to working away from home at the moment, the SELinux work is progressing slowly & is unlikely to be ready by feature freeze. Policy packaging is being done with Debian people now, and a patch to remove unneeded messages from sysvinit will be forthcoming in the next couple of days, so that selinux support in sysvinit can be turned on again. Deferred.
Meeting:						None listed.
BenC						Not present – e-mail update received.
High	Implemented	Implemented	kernel-roadmap-dapper	ben-collins		Informational overview spec. Implemented.
High	Implemented	Implemented	newer-hotplug-subsystem	ben-collins		Informational overview spec. Implemented.
Proposed	Implemented	Implemented	community-server-hardware-testing	ben-collins	?	Pretty much implemented. Announcement was sent out. Note from mdz: the remainder of server-hardware-testing is to collect information from the community on which hardware they are testing, and track test results through the release cycle, so that should be ongoing
Medium	Implemented	Implemented	ubuntu-server-kernel	ben-collins	1	Implemented.
Medium	Implemented	Implemented	preventing-hardware-support-regr...	ben-collins	3	Implemented. Note from mdz: apart from daily builds, preventing-hardware-support-regressions had some other components, like calling on users to test, that should be marked as in progress until all of the steps are complete.
General			General	BenC		Kernel status: Niagara: support integrated Reverted 2/2 Mem layout, was causing too many issues. Will have to resolve any problems with highmem and hibernate, which this change was expected to fix. In general, things are pretty stable.
Meeting:						None listed.
daniels						Not present – spec implemented.
High	Implemented	Implemented	x-roadmap	daniels	35	Implemented.
General			General	daniels		
Meeting:						None listed.
dholbach						
High	Implemented	Implemented	best-practices-bugs	dholbach		Implemented.
High	Implemented	Implemented	test-plans	dholbach		Implemented.
Low	Implemented	Implemented	inclusion-of-docs	dholbach		Implemented.
General			General	dholbach		this week: UI sprint (worked on gdm login screen, icons, gnome-session fading) this week (todo): UI sprint, more icons, little improvements here and there next week: new GNOME (2.14.0), catching up with bugs
Meeting:						None listed.
doko						
Proposed	Informational	Informational	openoffice	doko		Was:: nearing 2.0.2 (oob680m5 snapshot), experiencing more than one build/soyuz problem, beeing debugged together with infinity, i386 and powerpc builds succeeded, amd64 packages, ia32-libs* updated (hi seb128 :), Riddell: please check kde, -110n still building (12+ hours), should be ready for new processing tomorrow.
High	Approved	Implemented	openoffice-gnome	doko	?	Was:: gnome-file-selector (needs more fixes -> martink, next week). Now: 2.0.2 release announced today, -110n package uploaded, other packages will follow after flight-5

Medium	Approved	Implemented	toolchain-roadmap	doko	28	Was:lsimplemented, pending the uploads of the final release versions (4.1.0, 4.0.3, 3.4.6), the latter pending approval from jbailey. The upstream releases are scheduled for February. GCC 4.1.0 status - RC2 now, for Ubuntu it's Java only http://gcc.gnu.org/ml/gcc/2006-02/msg00592.html the changes compared to RC1 look unrelated after review GCC 4.0.3 status - the plan was to have a release immediately after the 4.1.0 release. No new update. GCC 3.4.6 status - asked the maintainer, waiting for reply, RC should have been Feb16, release end of Feb. - nearly all changes are backports for C++ regressions Note that for all release branches only regression fixes are allowed at that point, so we may set this target to completed as well, considering any further uploads as bug fixes. Toolchain related: the current make 4.1 beta4 is suboptimal. rc1 is released, maybe it's worth an update. See http://bugs.debian.org/342726 will be implemented shortly, but it's missing updates for the final gcc-3.4.6 and gcc-4.0.3 releases. upstream did release prereleases, so I expect this to be finished next week. Now: gcj-4.1 final uploaded, gcc-3.4.6 final uploaded, gcc-4.0.3 release is expected today, then toolchain-roadmap can be set to implemented
Medium	Approved	Approved	python-roadmap	doko	10	Was: : final gcj-4.1.0 Now: only change this week an update to current CVS leading to 2.4.3, plus bug fixes
Low	Pending Approval	Deferred	java-roadmap	doko	33	Was: native-gcj: gij/gcj-4.1 update, eclipse update, some package rebuilds. implemented, without -doc packages (API documentation) – what can be implemented has been (Ooo requirements) , the rest is deferred.
General			General	doko		- openoffice.org-amd64: all ia32-libs* packages updated, spec set to implemented . - other: gcc-3.3/gcc-3.4 security updates, zope3 in main installable, other bug fixes and bug tracking work - next week: OOo sprint, OOo fixes, OOo bug work, fixing other bugs. I would like that somebody is testing/caring about OOo on amd64 with scim, maybe somebody at the I10n sprint can take care of that. Having no clue about scim at the moment, maybe something like an ia32-libs-scim is needed.
Meeting:						None listed.
fabbione						
High	Implemented	Implemented	server-candy	ubuntu-server	30	"Ship a Server Test Suite on the CD": deferred. "Third party software inclusion": we have a list of apps submitted by community that needs to be reviewed (licence) and in case packaged. "central snakeoil SSL setup": missing 2 packages. "Create an MD5 checker for the Ubuntu Installer rescue mode": deferred. All code has been done. Note that this goal is considered Implemented for Dapper. Remaining pieces deferred to Dapper+1. added LAMP install target to server CD. Missing/buggy: apache2 for "central snakeoil SSL setup" and kernel -server as default from CD install.
Medium	Implemented	Implemented	boot-from-usb	fabbione	5	Implemented.
Medium	Implemented	Implemented	installer-volume-management	fabbione	2	Implemented. There is one (minor corner case) bug that is giving me headache to fix. Otherwise it ROCKS.
Medium	Implemented	Implemented	ubuntu-cluster	fabbione	15	Usual round of redhat cluster suite updates. SLURM - deferred (licence issues and no time to port it to gnutls), DRBD - deferred (it's basically only x86* and it has a bunch of annoying limitations to be really useful), LVS (ipvsadm and keepalived) - packages moved to main (need to check if they are on CD), ganglia - deferred (pkgs are old and missing a lot of love. Ivoks did an amazing race against time to get them done with no luck). Note that this goal is considered Implemented for Dapper. Remaining pieces deferred to Dapper+1. OCFS2 kernel update and several hours stress test on upstream request. Waiting their release for new userland to sync with the kernel that will allow (finally) full desync later.
General			General	fabbione		* RLIMIT_PRIO: should be all in place. * last week: mostly holiday. Catching up, bug fixing. * next week: partman-auto/espresso (plan to review what's done with Kamion after meeting), kernel security, bug fixing.
Meeting:						None listed.
hno73						
High	Approved	Implemented	example-content	henrik		I've now set all the filetypes to 'Selected' status, which means what is there can ship, but if something better comes along we can/should switch. As an example, the gimp file is a design for a gimp splash screen, but Pascal on the art team has promised me an Ubuntu one, which would obviously be nicer. I'll upload an updated tarball later today. The one gap that remain is the video clip: Someone has made a recording of an Ubuntu desktop session, but it will need cleaning up, converting to ogg and possibly adding a sound track (I have some music from South Africa that might do nicely :). Looking at the original spec, the filetypes mentioned there have been assembled, but the second section which describes integration with various apps, like evolution, has not been done. We decided that we didn't want to mess with user profiles at this point, but might try it for dapper+1 after more discussion. So in that sense we might consider the spec as partially implemented, partially deferred (as of later today when I upload a new tarball).
General			General	heno		
Meeting:						None listed.
infinity						

High	Implemented	Implemented	reducing-duplication	adconrad		Was:thunderbird and enigmail updates to kick mozilla out of main (yay!) pitt: DONE: dropped MySQL 4.1; final changes to drop mozilla (thanks infinity!), lots of Python 2.3 cleanup (thans doko!); PLAN: gnutls 11->12 transition next week for all packages but openldap; BLOCK: actual mozilla demotion, need help with openldap, need proper madison and melanie-like tools somewhere Now: pitt: DONE: mizilla and python2.3 in universe; PLAN: gnutls 11->12 transition for all packages but openldap; BLOCK: need help with openldap. Although this goal has an on-going component, for repting purposes it is considered Implemented.
Medium	Implemented	Implemented	usplash-initramfs	adconrad	2	Implemented.
Medium	Implemented	Implemented	splash-down	adconrad	7	Was: To be worked on next week, need to look into some usplash/bogl misfeatures blocking changes required to make splash-down work sanely Now: Implementation for this has landed and is working. A few bugs will need to be ironed out (some text flicker, and making sure we survive for the last few seconds of the shutdown), but it's pretty much working as-is. Implemented.
Medium	Implemented	Implemented	iniramfs-updates	adconrad		Implemented.
Low	Implemented	Implemented	thinclient-usplash	adconrad	4	Implemented.
General			General	infinity		last week build: Spent most of the week with soyuz/builddds, both hunting and fixing bugs, as well as getting sparc and ia64 caught up again. last week packaging: PHP security updates are uploaded and built, just need to release an advisory, did a bunch of work locally on Thunderbird and Thunderbird extensions. next week build: hppa should come online soon, and need the same (or tougher) sort of love that sparc and ia64 have been getting, plus a vicious soyuz bug that makes mass-give-backs more painful needs to be sorted. next week packaging: Thunderbird, Thunderbird, Thunderbird, and more Thunderbird, I think. Lots of bugs, and I'd like to cut them in half before release. I also need to get some LRM upstream bumps in (pending approval). I need a UVF exception for fg1rx (again), and avm fritz (whacky isdn thingee that doko uses)
Meeting:						None listed.
iwj/Diziet						
High	Implemented	Implemented	automated-testing	ijackson	10	Implemented. Working on setting up Xen-based virtualisation for running tests in (for safe deployment on one of my systems here, and proof of concept for datacentre arrangements). Defeated: Xen host, grub, mad bridge stuff. Battling: lvm2. To come: pbuilder, autopkgtest changes/improvements. New package name `autopkgtest' is everywhere; old name to be deleted RSN. Spent most of last week wrestling with Xen, pbuilder, etc. There turned out to be an annoying tcp checksum bug in Xen. I now have a working script for setting up testbeds.
High	Implemented	Implemented	default-applications-firefox	ijackson	10	Implemented. There has been some feedback from the `you have chosen to open ...' suppression. epiphany and galeon need to disable the change which I made by default in gecko; seb128 will be sending a mail about this. No-one says so far that it prevents downloading, although the UI for getting a download is different now which has annoyed some people. If you disagree with the new way please discuss it on ubuntu-devel. When discussed on ubuntu-devel, no-one was clearly in favour of the new behaviour without `you have chosen to open ...', so I will revert it.
Medium	Approved	Approved	developer-documentation	ijackson	15	Was:Editing work in progress (slow). Now: No progress this week.
Low	Deferred	Deferred	package-dependency-fix	ijackson	10	As per mdz deferred; as we don't want to make intrusive changes to the packaging toolchain for dapper
General			General	iwj		Firefox maintenance: Not done much this last week apart from dealing with bugs and discussing the DefaultApplicationsFirefox change. I'm halfway to preparing a new release and that will go out today. (An assortment of minor things; I need to do a breezy->dapper test to check some of the bugs.) horizontal scroll vs unwanted back problem (Malone 31827): do we have anyone who's an expert on mouse input processing in X ? Next week: on holiday. Email/bugs backlog: not too bad. I didn't fix the amd64 gs bug 29878 yet; will try to do that tomorrow.
Meeting:						None listed.
jbailey						Not present – e-mail update received.
General			General	jbailey		* No changes from last week, was away at a sprint. doko and I are sorting out the glibc test build for ToolchainRoadmapNg. Bug count in general is good.
Meeting:						None listed.
kamion						
Essential	Informational	Informational	ubuntu-express	kamion	?	Informational overview spec. Unimplemented status (counting only things on the to-do list that I think come under features rather than bugs): keymap support, language pack support, some of the partitioning changes, yaboot support, half-decent localisation (text that comes from the debconf database is localised, but I need a small debconf change before I can make that apply to everything), and preseeding glue

Essential	Approved	Approved	ue-partitioning-tool	kamion	8	Was: Fabio's working on a disk selector; hearing encouraging noises. I finally got back to gparted upstream, so we should have some movement there soon too. about 40% done ; fabbione is making good progress on restructuring partman's UI Now: Handed off gparted work to Daniel Silverstone; we've had a couple of long in-person discussions about where to take it for Dapper, which have resulted in a pretty clear plan of action that shouldn't take Daniel too long to do. Waiting on disk selector in partman from Fabio for most of the rest of this. Added format checkbox to mountpoint page. About 50% done ; fabbione has done the partman disk selector, will upload shortly then I'll do the espresso integration; Kinnison is working hard on gparted and we know where we're going now
Essential	Approved	Approved	ubuntu-express-base-system	kamion	8	Was: language and timezone pages both done (the latter using the Evolution map widget; http://people.ubuntu.com/~cjawatson/tmp/espresso-location.png), and Tollef's almost done with the keymap page. Nearly there on the major missing bits of UI! 70% done : missing keymap handling (Mithrandir), apt-setup (pretty easy, was loosely waiting for default-apt-sources which is now done), polish up hostname handling (minor) Now: Merged Tollef's fleshed-out keymap page. It's QWERTY-only for now and the UI's just a big list of keymaps. about 75% done ; keymap support's in but needs testing and bug-fixing
Essential	Approved	Approved	ubuntu-express-copy-filesystem	kamion	3	Was: Working on removing live-only packages; mostly done, just waiting on the builddd to deliver an extra manifest file (discussed with infinity earlier today). After that I only need to arrange to copy network configuration over and I think this spec will be implemented. 95% done ; need one more piece from the builddds which infinity is doing, and need to copy network configuration. Now: Uploaded live-only package removal code; still blocked on manifest from builddds. 95% done ; still waiting for desktop manifest from builddds, and still need to copy network configuration
Essential	Approved	Approved	ubuntu-express-bootloader	kamion	2	Was:all infrastructure there, just need to make yaboot work the same way so powerpc is usable, and fix some high-impact bugs (like grub having to be installed from the network at present) 90% done ; high-impact grub bugs fixed, just yaboot to go now Now: Basically implemented now, although needs testing of espresso-yaboot since my powerpc system's CD drive is too broken for me to test it myself. 95% done ; yaboot support just needs testing and then this will be done
Essential	Approved	Approved	ue-gnome-ui	kamion	15	Was: about 70% done : keymap page fleshed out although needs polishing Now: Nearly all UE progress this week has been here; I visited the UI sprint in London on Monday, got good feedback, and have implemented about half of the necessary changes. About 75% done : while there's been a lot of progress here since last week, there's also been a lot of stuff added from my visit to the UI sprint, of which I've dealt with about half
Essential	Implemented	Implemented	ue-language-packs	kamion	3	Was: 0% done : was blocked on the language page, done earlier this week, so can make progress soon now -- this is one of the smaller specs. I need to clone the progress bar cancellation support I did for cdebconf earlier into debconf, and after that it's straightforward Now: Implemented. 100% done
Medium	Implemented	Implemented	cd-build-process	kamion	2	Implemented. (If we desperately need to get install-live ISO build time down beyond the current 20 minutes, I can backport changes from Debian that eliminate the apt-ftparchive bottleneck, but that will take some work.)
Medium	Implemented	Implemented	cd-bootloader	kamion	5	Implemented.
General			General	kamion		next-week: Planning on Flight CD 5 today if possible; Edubuntu amd64 CDs are overflowing and the live CDs need a good kicking in general (just uploaded a fix for some of the problems). Sort out the identification page's UI today. Another UI sprint visit on Friday. Probably more UI hacking for the rest of the week. Note: agreed that Mithrandir and Infinity will handle flight 5
Meeting:						
keybuk						Not present -- e-mail update received.
High	Implemented	Implemented	hardware-activation	keybuk	5	Implemented.
High	Implemented	Implemented	udev-roadmap	keybuk	14	Implemented. (happy with the udev version, newer versions include support for kernels 2.6.16 and post but we're not shipping those.)
High	Implemented	Implemented	network-magic	keybuk	20	Implemented. Changes to network manager done, and it's been moved to main; My inclination is to install by default on the LiveCD but not on in desktop Note from mdz: excellent idea and if you can think of a way to get it into desktop by default and gracefully roll back, let's do that too. One of the most common Network Manager "bugs" is people complaining that it doesn't detect their network card; in reality this is because they've got some hard-coded essid or something in /etc/network/interfaces so n-m just doesn't touch it. Unfortunately the "failure mode" is to simply pretend the interface doesn't exist. I've spent a few days trying to make this better, and not having much luck -- n-m is built on the premise that it can control every interface it knows about; trying to bolt on "interfaces I know about but can't touch" is hard -- especially given how much dbus is involved!
High	Implemented	Implemented	hardware-detection	keybuk		Implemented.
Medium	Implemented	Implemented	streamlined-boot	keybuk	10	Implemented.
Low	Implemented	Implemented	urgent-reboot-notification	keybuk		Implemented.
General			General	keybuk		Since last meeting: Last days of multi-arch sprint in Oslo.
Meeting:						None listed.
Kinnison						
High	Implemented	Implemented	power-management-configuration	dsilvers	?	Was:In simple terms the spec is now 'implemented'. I have integrated a lot of upstream changes and I have gotten upstream to take on a significant portion of the changes I made locally. Now: Mostly bugfixing. Upstream continues to take an active interest in taking on our patches and helping with our bugs.

General			General	dsilvers		<p>* UbuntuExpress/GraphicalPartitioningTool: Correcting UI glitches in gparted's installer-mode patch, suppressing filesystem building and generally making it fit better with espresso.</p> <p>* General: Some soyuz work, correcting bugs with ACLs on NEW , the archive was in "you can check out any time, but you can never leave" mode - i.e. we couldn't remove packages, been fixed now.</p> <p>* ToDo: Continue bugfixing g-p-m, acpi-support, etc. Filling out rest of gparted needs for espresso. Espresso-UI work as agreed with Colin. Interspersed with that for the next two weeks is the Launchpad/Bazaar-NG sprint which I have to attend in London. I'll be doing my best to keep up with my distro work during the sprint also.</p> <p>* Bugs: No significant changes to last weeks numbers, pretty much as many opened as closed.</p>
Meeting:						None listed.
krstic						Not present, goal deferred.
Proposed	Deferred	Deferred	hardware-testing-catalog	krstic	?	split off as hardware-testing-catalogue mdy & BenC are handing community-server-hardware-testing etc. This goal is deferred to Dapper+1.
Meeting:						None listed.
lathiat						Not present – goal deferred.
High	Deferred	Deferred	zeroconf	lathiat	?	As per mdz this goal is deferred, as we have unresolved issues and it's too late to do much about it.
Meeting:						
mdz						
Essential	Implemented	Implemented	dapper-release-process	mdz		Implemented.
Meeting:						None listed.
Mithrandir						
High	Implemented	Implemented	media-integrity-check	tfheen	2	Implemented.
High	Deferred	Deferred	network-authentication	tfheen	30	Note from mdz: let's defer network-authentication officially from dapper goals.
High	Implemented	Implemented	simplified-livecd	tfheen	?	Implemented.
Medium	Implemented	Implemented	probe-for-root-filesystem	tfheen	10	Implemented.
Medium	Implemented	Implemented	live-cd-performance	tfheen	?	Implemented.
Medium	Implemented	Implemented	livecd-unionfs	tfheen	1	Implemented.
Medium	Implemented	Implemented	one-true-path	tfheen	3	Implemented.
Medium	Deferred	Deferred	openoffice-amd64	tfheen	?	Was: No progressDecision taken to defer this to Dapper+1
Low	Implemented	Implemented	livecd-squashfs	tfheen	?	Implemented.
General			General	Mithrandir		<p>misc: Sprint with Scott, had a sickday, been hacking on espresso. Still goes slower than I'd like to, but getting there. General bug triage</p> <p>next week: espresso, get popcon.u.c working</p> <p>blocked on: nothing</p> <p>also next week: flight 5 :)</p>
Meeting:						None listed.
mvo						
High	Approved	Approved	release-upgrades	mvo	10	Was:It is essentially complete, but we need to continue to track its deployment in production as far as infrastructure. Note from mdz: Please proceed with seeding/promotion/metapackages and then update it to implemented Now: Work continued on this Including some fixes and a local auto-test environment.worked with the lp people on getting the magic into the archive (done)
High	Implemented	Implemented	third-party-packages	mvo	10	Was: * uses gettext for the desktop files * menu-data updated and split out into own pkg * "All" category added * search improvements - added splash for grub Now: implemented, the problem is we don't really have any that are available in a external repository. updated and added gstreamer desktop files, uploaded new gdebi (mostly cosmetic fixes)
Medium	Implemented	Implemented	unattended-package-upgrades	mvo	3	Implemented.
Medium	Implemented	Implemented	default-apt-sources	mvo	?	Was:- default-apt-sources: * worked on the per-queue-failure code, decided to do something simpler. Spec to be progressed to approved. Now: implemented as described in http://wiki.ubuntu.com/DefaultAptSources (apt/aptitude/synaptic uploaded to dapper)

General			General	mvo		<p>Did:</p> <ul style="list-style-type: none"> - on the UI sprint (worked on various little things and the notification daemon to make it look cooler) <p>Will do next week:</p> <ul style="list-style-type: none"> - i18n sprint - get hold of infinity to get the auto-dist-upgrade test chroot setup - get the upgrade tool into the archive <p>next week also, backporting to breezy</p>
Meeting:						None listed.
ogra						
High	Implemented	Implemented	thinclient-faster-startup	ogra	?	Implemented.
Medium	Implemented	Implemented	thin-client-memory-usage	ogra	5	No way to make nbd-server create swap files on the fly before feature freeze, started working on a patch to have it ready for dapper+1, apart from that (and possible improvements through including dash needs more testing for dapper+1) The rest is implemented. to not loose the nbd requirements, i created a new spec: https://wiki.ubuntu.com/FullyAutomaticSwapServer
Medium	Implemented	Implemented	thinclient-sound	ogra / jam	2	Implemented.
Medium	Deferred	Deferred	thinclient-local-devices	ijackson / ogra ?	?	Deferred to Dapper +1.
Medium	Implemented	Implemented	screen-saver	ogra	?	Implemented.
Medium	Implemented	Implemented	screensaver-default-image	ogra	?	Implemented. xscreensaver package work done, jdub wants to do the artwork related stuff . The development is complete but artwork is still pending (due by UI freeze, coordinate with silbs/jdub/etc.)
General			General	ogra		<p>* general: hunting of the "no ssh keys are generated" bug and working on a fix, branched out a new devel branch for ltsp (http://people.ubuntu.com/~ogra/bzr-archive/ltsp/devel/), fixed several small ltsp bugs and cleaned up the code. fixed the last "gnome-screensaver ignores mediaplayers" bugs. worked on edubuntu-artwork ltsp enhancements (ldm theme handling, usplash theme inclusion in ltsp-client), exchanging of the vendor logo, wallpaper selection etc</p> <p>next-week: more testing and digging for ltsp bugs, more edubuntu-docs work (needs to go to main) writing some ltsp documentation, getting edubuntu-artwork ready, flight5 preparation i guess (strike that if we do it today...please announce it a day in advance, its hard to coordinate with testers if it comes completely unannounced), more gnome-screensaver bughunting, play the CD space shuffling game to tame edubuntu</p>
Meeting:						jdub to provide screen-saver artwork.
pitti						
High	Implemented	Implemented	belocs-locales	pitti	2	Implemented.
Medium	Deferred	Deferred	automatic-printer-conf	pitti	2	Was: requires a fair amount of new code and work, I'd rather make cups less buggy than add hal-cups-utils and try to integrate it; it would probably require sb who knows more about gnome than me anyway. Hopefully somebody comes along and gives gnome-cups-manager some love. Now: automatic-printer-conf: no blocks, no time, deferred to dapper+1.
Medium	Implemented	Implemented	gststreamer-audio-backend	pitti	3	Implemented everything on our side; the libgnome audio events issue is still left, but that's an upstream thing .
Medium	Implemented	Implemented	language-pack-vs-support	pitti	?	Implemented.
Medium	Implemented	Implemented	langpacks-desktopfiles	pitti / zyga	5	Was: DONE: fixed the majority of packages which don't use cdb+gnome.mk; PLAN: do remaining 25ish manual package fixes, discuss the stuff with gnome/fd.o upstream. Update: the last remaining packages were fixed on Friday morning and this spec is now Implemented. Now: DONE: fix all non-KDE packages which needed manual updating, spec completed; PLAN: discuss the stuff with gnome/fd.o upstream.
Medium	Deferred	Deferred	firewall	pitti	?	Was: long-outstanding bounty proposal; no news from carstenh for quite a while now. Now: deferred to Dapper +1. This is now being discussed between Carsten and Krishna. Now: DONE: almost finished negotiating the bounty with carstenh, with 95% probability this will be deferred to dapper+1; To be delivered by 1 May 2006. DONE: negotiated bounty with carstenh, approved by mdz; target date: May 1st; no blocks any more
General			General	pitti		<p>reducing-duplication: DONE: bulk of gnutls12 migration (only build lag delays the actual demotion), seed changes for demoting libgd, evaluated libsqlite0->3 transition, reordered spec page for easier reading</p> <p>general stuff done this week: many bug fixes, fixed thunderbird to work with locale packages, created tbird locale packages</p> <p>next week: bug squashing ... and heavy CD testing again</p>
Meeting:						None listed.
seb128						
Essential	Implemented	Implemented	gdm-keyboard-layout	seb128		Implemented.

Summary of the changes for it (using https://wiki.ubuntu.com/DapperDesktopPlan):							
Essential	Approved	Approved	dapper-desktop-plan	seb128	10	<ul style="list-style-type: none"> * GDM "We are going to:" points are done. To note: - the icons are broken by a gnome-icon-theme change but I've a fix pending after discussion with upstream, I'll upload today. - the language selector has been moved to mvo - "Default System Session" should be renamed because it's not clear enough according to the spec. * network-applet vs. Network Manager: network-manager has not been pushed to the desktop * "Log Out" is not easy enough to find: that change has been made but (happens only for new installations sincethat's user configuration) * The session dialog need to be reworked: the new dialog has been made. It's called from the panel applet. I'll fix the panel menu to have only one item and calling that dialog today. The icon set doesn't match the GNOME one though we need to get new icons for it ... do we have someone working on that? * Workspace switcher: change has been uploaded * battstat applet or gnome-power-manager: that point is about a new icon. * update notifier: that has been done by mvo * "Add to Panel" dialog: The changes have been made out of the new icons for the menu bar and main menu * applets: We assigned bugs we got about that but didn't do a applet by applet review * Top panel icons: The changes have been made. There was some discussions from the documentation team about making yelp discoverable but keeping a panel icon for that is probably not the way to go, launcher are for frequently used launchers, not for something you want to notice on first use only * Workrave It's not a part of the desktop, not sure why it was listed in the spec. The change has not been made but would be easy to do, I can do that today * contact-lookup-applet Same, that's not a part of the desktop but should be easy to fix. <p>Now: GNOME 2.13.92, updated a bunch of GNOME packages to ship a -dbg, session dialog change for "session lock" uploaded, load of bugs triage and fixing.</p>	
	High	Implemented	Implemented	hide-admin-tools-to-users	seb128	2	Implemented.
	High	Implemented	Implemented	menus-revised	seb128	2	Implemented (may adjust some stuff according to users comments though) - I've reactivated the window-properties caplet as discussed
	High	Implemented	Implemented	video-playback	seb128	5	Implemented, mail for testing has been send to the ubuntu-devel-announce list (thanks Daniel)
	Medium	Implemented	Implemented	faster-gnome-startup	seb128	3	Implemented (new fontconfig with mmap cache mentionned as an option is still beeing worked upstream so probably not for dapper, GTK icon cache specification has issues will be sorted for Debian but probably not for dapper neither, others points are done and work correctly)
	Medium	Deferred	Deferred	rhythmbox-ipod	seb128	5	Was: gstreamer0.10: updated rhythmbox. Now: gstreamer0.10: desktop and seeds updated for gst0.10, gst0.8 can be demoted to universe. This goal is low priority, will probably not happen for dapper, too many stuff to do, upstream didn't work on it, and I will probably not manage to free a week or so to code on that. Deferred.
	General			General	seb128		<p>UI sprint: played with new icons and theme, updated gdm menu and session dialog icons sets, played with gtkrc for GDM (colors, fonts, etc)</p> <p>other: a few GNOME updates from this week, fixed some bugs on the desktop</p> <p>UI sprint to do: profiling GDM, apply gnome-panel help submenu changes decided, doing the menu items labels and tooltip changes (just got the list), doing some little UI changes to the dialog that Martin did for the sync during device ejecting</p> <p>next week: GNOME 2.14.O, catchup with bugs and mails backlog</p>
	Meeting:						None listed.
	sivan						Not present – no e-mail update received.
	Medium	Approved	Approved	home-user-backup	sivan	10	Was: sivang DONE: fs info provider class, backup media devices detection, some GUI bits, work on ISOBuilder CDBurner , Backup class. Researched about DrakeBackup, which closely resembles our design, is a perl hack, however, took some pointers from there. Reworked all the worker classes to use generators for effective progress report throughout their operations. Now: I've still got work to complete the goal, I have ran into a bad IO problem that delayed completion. I would require 2 more days, if not approved, I will continue in universe. (the issue is solved) Will this be completed and included in Dapper?

Riddell							
High	Implemented	Implemented	kubuntu-roadmap-dapper	jr	80	Implemented - flight 4 released, new kubuntu-default-settings with a lot of tweaks	
High	Implemented	Implemented	simplify-kde	jr	?	Implemented.	
High	Approved	Approved	kubuntu-express	jr	25	Was: aiming to have initial release on Friday Now: Kamion has merged and espresso-frontend-kde released, should now be on the CD	
Medium	Approved	Approved	kubuntu-documentation	jr	10	Was:documentation seems to be on track for docs freeze next month Now: no update given	
Medium	Implemented	Implemented	kubuntu-system-tools	jr	10	Implemented. new guidance with bug fixes tested and uploaded	
Medium	Implemented	Implemented	kubuntu-package-manager	jr	20	This spec is is implemented, however the .deb installer part is deferred.	

Low	Deferred	Deferred	langpacks-desktopfiles-kde	jr	?	Was: investigated for KDE, looks possible if careful to avoid kconfig/klocale loop. Now: new pending review, likely aim for dapper + 1. Deferred as can not be completed in time for dapper.
Proposed	Deferred	Deferred	kubuntu-launchpad-integration	jr	3	Was: No update given Now: moved target to dapper + 1. Deferred
General			General	Riddell		ui sprint: new logo, usplash, kdm theme done along with kwii, ui tweaks done with sabdfi also: test and uploading various fixes people have sent me TODO: kubuntu-express: better qtparted integration, location page, keyboard page ui sprint: ksplash, background, window manager look, various other artwork (example content)
Meeting:						
General:						
General			General Comments	All		* Check your Priorities, Statuses, Estimated Developer Days and Expectation of Delivery in LP each week and keep them up to date. * Remember to mention if actions listed here one week, such as discussions etc, have been completed the next week. * Note the the Dapper Feature Freeze is now in effect (https://wiki.ubuntu.com/DapperReleaseSchedule) * NOTE next week's meeting will be on FRIDAY 17 March at 14:00
