Priorities	Status Indicators:	Expectation	Goal Type
Essential	DONE	Certain	Confirmed Dapper goal
High	On track, all OK	Probable	Considered Dapper Goal
Medium	Slightly behind schedule	Unlikely	Not guaranteed for Dapper
Low	Blocked / needs mgmt input	Deferred	

Prio.	Was	Now	Name	Assign	Days	Dapper Development Status Update: 06 April 2006
ajmitch						**Not present – goal deferred.**
Medium	Deferred	Deferred	selinux	ajmitch	?	Added as a Dapper goal. Was: Due to working away from home at the moment, the SELinux work is progressing slowly & is unlikely to be ready by feature freeze. Policy packaging is being done with Debian people now, and a patch to remove unneeded messages from sysvinit will be forthcoming in the next couple of days, so that selinux support in sysvinit can be turned on again. **Deferred.**
Meeting:						None listed.
BenC						
High	Implemented	Implemented	kernel-roadmap-dapper	ben-collins		Informational overview spec. **Implemented.** Stabalizing on all platforms. Lots of major bugs fixed in the last uload (20.30).
High	Implemented	Implemented	newer-hotplug-subsystem	ben-collins		Informational overview spec. **Implemented.**
Proposed	Implemented	Implemented	community-server-hardware-testing	ben-collins	?	**Implemented.** Announcement was sent out. Note from mdz: the remainder of server-hardware-testing is to collect information from the community on which hardware they are testing, and track test results through the release cycle, so that should be ongoing
Medium	Implemented	Implemented	ubuntu-server-kernel	ben-collins	1	**Implemented.**
Medium	Implemented	Implemented	preventing-hardware-support-regr...	ben-collins	3	**Implemented.** Note from mdz: apart from daily builds, preventing-hardware-support-regressions had some other components, like calling on users to test, that should be marked as in progress until all of the steps are complete.
General			General	BenC		- Bug status: Way behind. Recent flight release along with the few days vacation left me behind. Catching back up over this weekend. **Note from : maybe a kernel-oriented bug day would help? dholbach: can you work with the kernel team to assemble some basic docs for kernel bug triage?**
Meeting:						None listed.
daniels						**Not present – spec implemented.**
High	Implemented	Implemented	x-roadmap	daniels	35	**Implemented.**
General			General	daniels		
Meeting:						None listed.
dholbach						
High	Implemented	Implemented	best-practices-bugs	dholbach		**Implemented.**
High	Implemented	Implemented	test-plans	dholbach		**Implemented.**
Low	Implemented	Implemented	inclusion-of-docs	dholbach		**Implemented.**
General			General	dholbach		icon-mission: tangerine hit Universe, hope to get Dave's icons for Human soon this week (done): bug triage, bug fixing, icon-cache stuff this week (todo): more bug triage, preparing Universe for Release next week: more bug triage, bug day, GNOME 2.14.1
Meeting:						None listed.
doko						
Proposed	Informational	Informational	openoffice	doko		Was: sprint notes at https://lists.ubuntu.com/archives/ubuntu-devel/2006-March/016568.html, packaging fixes, splitting help pot files, new locale. outstanding: two crashes (atk is currently addressed upstream). two new locales, bug fixes, finding that we import all message strings as translated into rosetta, en-au dictionary and thesaurus available (jdub, for your slides ;-), working on OOo 2.0.2 packages for breezy (low prio) Now: - found and fixed the rosetta import failure (nearly all strings marked as translated), uploads pending db update, fixed packages for ia64, working on breezy backport packages, other fixes, started occassional trunk builds.

Priority	Status	Status	Goal	Owner	#	Notes
High	Implemented	Implemented	openoffice-gnome	doko	?	Was:gnome-file-selector (needs more fixes -> martink, next week). Now: 2.0.2 release announced today, -l10n package uploaded, other packges will follow after flight-5
Medium	Implemented	Implemented	toolchain-roadmap	doko	28	final versions in the archives for all architectures (v8 on sparc), java problems on hppa (not that critical for main), lamont not yet happy, infinity starts feeling better. glibc i386 on amd64 fixed, patch comparision (unstable vs. dapper) beeing addressed.
Medium	Approved	Slow progress	python-roadmap	doko	10	Was: : final gcj-4.1.0, then only change this week an update to current CVS leading to 2.4.3, plus bug fixes. No Update given.
Low	Deferred	Deferred	java-roadmap	doko	33	Was: native-gcj: gij/gcj-4.1 update, eclipse update, some package rebuilds. implemented, without -doc packages (API documentation) – what can be implemented has been (Ooo requirements) , the rest is deferred. Now: java problems on hppa fixed, glibc could use a patch comparision (unstable vs. dapper, hint, hint jbailey)
General			General	doko		- long font discussions: switch of default fonts to metric compatible fonts objected by our gnome attorney, now proposed to introduce the Times/Helvetica aliases again (will change back to "ugly" fonts in firefox, Diziet is currently investigating). looks we cannot have both. - printing bugs: coordinated with pitti, prepared new libusb, foomatic-db, hplip, all new upstream, still testing. - other: look at various python testsuite failures, together with `anthony, libffi update, prepared python2.5a1 packages for gustavo.
Meeting:						None listed.
fabbione						
High	Implemented	Implemented	server-candy	ubuntu-server	30	All code has been done. **Note that this goal is considered Implemented for Dapper. Remaining pieces deferred to Dapper+1.** added LAMP install target to server CD. Missing/buggy: apache2 for "central snakeoil SSL setup" and kernel -server as default from CD install. Added rc.local support on mdz/sabdfl request.
Medium	Implemented	Implemented	boot-from-usb	fabbione	5	**Implemented**.
Medium	Implemented	Implemented	installer-volume-management	fabbione	2	**Implemented.** There is one (minor corner case) bug that is giving me headacke to fix. Otherwise it ROCKS.
Medium	Implemented	Implemented	ubuntu-cluster	fabbione	15	**Note that this goal is considered Implemented for Dapper. Remaining pieces deferred to Dapper+1.** here will be no ocfs2-tools release. Done a lot for clvm and multipath-tools (from fixing kernel bugs, down to rearrange parts of the cluster boot sequence). Missing one bug fix in multipath-tools (that i am aware of at least).
General			General	fabbione		* last week: mainly cluster work, some X bug fixing and a bit of sparc love. * next week: bug squashing (mainly X). heno to assist with triaging X bugs.
Meeting:						None listed.
heno						
High	Implemented	Implemented	example-content	henrik		**Implemented.** I've now set all the filetypes to 'Selected' status, which means what is there can ship, but if something better comes along we can/should switch. Looking at the original spec, the filetypes mentioned there have been assembled, but the second section which describes integration with various apps, like evolution, has not been done. We decided that we didn't want to mess with user profiles at this point, but might try it for dapper+1 after more discussion.So in that sense we might consider the spec as partially implemented, partially deferred (as of later today when I upload a new tarball). Now: Implemented. Complete apart from a few screenshots in the documents and presentations that need updating
General			General	heno		* winfoss DONE: The layout has been given a complete overhaul for dapper, borrowing design elements from the desktop (icons and colours). A new version was uploaded on Monday. I consider it complete appart from fresh screenshots that will be needed once the Ubuntu desktop has settled. See: https://wiki.ubuntu.com/WinFOSS * winfoss TODO: Modify the new skin for kubuntu and coordinate app selection with Riddell * accessibility: I'm waiting for certain key packages to be seeded to the live CD so it can be tested (infinity volunteered to help with this)
Meeting:						None listed.
infinity						
High	Implemented	Implemented	reducing-duplication	adconrad		Although this goal has an on-going component, for reprting purposes it is considered **Implemented**.
Medium	Implemented	Implemented	usplash-initramfs	adconrad	2	**Implemented.**
Medium	Implemented	Implemented	splash-down	adconrad	7	Implemented.
Medium	Implemented	Implemented	initramfs-updates	adconrad		**Implemented.**
Low	Implemented	Implemented	thinclient-usplash	adconrad	4	**Implemented.**

General		General		infinity	last week buildd: Same old, same old, tracking build failures. Again, can I ask people to pretty please test before they upload? Please? last week distro: Participate in the Flight-6 release, bugfixes and updates for LRM, MySQL, net-snmp, put on my jbailey hat and started triaging and local hacking on glibc and initramfs updates, transitioned to new libmysqlclient with different symbol versioning. next week buildd: Setting up livefs builds for Xubuntu, getting dapper-autotest underway, and tracking down more universe build failures. next week distro: Should be uploading glibc and initramfs, perhaps several times for the latter, as well as upstream version bumps for samba and subversion, and attacking more major bugs assigned to me over this last week.
Meeting:					None listed.
iwj/Diziet					
High	Implemented	Implemented	automated-testing	ijackson	10	**Implemented.** Working on setting up Xen-based virtualisation for running tests in (for safe deployment on one of my systems here, and proof of concept for datacentre arrangements). Defeated: Xen host, grub, mad bridge stuff. Battling: lvm2. To come: pbuilder, autopkgtest changes/improvements. New package name `autopkgtest' is everywhere; old name to be deleted RSN. Now: A few discussions with Xen people but otherwise no real progress this week.
High	Implemented	Implemented	default-applications-firefox	ijackson	10	**Implemented.** There has been some feedback from the `you have chosen to open ...' suppression.   epiphany and galeon need to disable the change which I made by default in gecko; seb128 will be sending a mail about this. Now: Reverted `you have chosen to open ...' before I went away. No complaints from that. So I think we can call this goal complete.
Medium	Approved	Started	developer-documentation	ijackson	15	Was:Editing work in progress (slow). Now: no progress to report.
Low	Deferred	Deferred	package-dependency-fix	ijackson	10	As per mdz deferred; as we don't want to make intrusive changes to the packaging toolchain for dapper
General		General		iwj	Bugfixing: nice collection of bug reports to try to fix, working through them atm. Firefox: nice collection of bug reports to try to fix. Firefox: Still having lots of reports of unwanted back/forward due to horizontal scrolling. I thought that was fixed with an x.org config change ? Anyone know what I should tell these users ? Last week: was on holiday. **Note from mdz, iwj to put together some FF bug triage help documentation to assist people to be able to traige ff bugs.**
Meeting:					None listed.
jbailey					**Not present – not required**
General		General		jbailey	* No changes.
Meeting:					None listed.
kamion					
Essential	Informational	Good progress	ubuntu-express	kamion	?	Informational overview spec. Internationalisation support on its way, now that I've implemented the escape capability in debconf. We pretty much have internationalisation now, apart from a few glitchy strings. The POT file is in Rosetta and is being translated. Merged component packaging into espresso proper, which means that I will no longer be blocked on problems of the form "I don't want to create yet another binary package for this".
Essential	Approved	Good progress	ue-partitioning-tool	kamion	8	Was:Various gparted bugs fixed, thanks to Daniel. Landed and integrated Fabio's disk selector. Now: Fixed manual partitioner not to assume ext3 (too late for Flight CD 6 though). About **80% done**; landed disk selector, fixed lots of issues in manual partitioner
Essential	Approved	Good progress	ubuntu-express-base-system	kamion	8	Was: Timezone defaults fixed. Started in on sorting out network configuration; would have finished this evening but for laptop hardware problems. Looked at apt-setup this morning, but it turned out to be a bit more than the simple job I was hoping, so stepping back for a bit to rethink. Mithrandir's doing timezone->country->locale inferring. **90% done**; keymap page done, timezone defaults fixed, Tollef's doing timezone->country->locale inferring work, apt-setup remains Now: Network configuration done. Started working on propagating keyboard selection to the installed system.
Essential	Approved	Awaiting Deployment	ubuntu-express-copy-filesystem	kamion	3	Was: **95% done**; still need to copy network configuration Now: Estimated install copying time fixed.**100% done**; network configuration now copied (not uploaded yet). Some nice-to-haves still remain.
Essential	Approved	Beta Available	ubuntu-express-bootloader	kamion	2	Was:Basically implemented now, although needs testing of espresso-yaboot since my powerpc system's CD drive is too broken for me to test it myself. **95% done**; yaboot support just needs testing and then this will be done, but this is blocked on making keymap support work well enough for them that they can get that far Now: **95% done;** still need to get past some bugs on powerpc so that powerpc users can test yaboot support.
Essential	Approved	Good progress	ue-gnome-ui	kamion	15	Was:dentification page totally reworked; several other small UI changes. **About 75% done**; again, some progress since last week, but another bunch of stuff got added during my second visit to the UI sprint Now: Daniel did the breadcrumbs rearrangement; yay. **80% done**; settling down fairly well now
Essential	Implemented	Implemented	ue-language-packs	kamion	3	**Implemented. 100% done**
Medium	Implemented	Implemented	cd-build-process	kamion	2	**Implemented**. (If we desperately need to get install+live ISO build time down beyond the current 20 minutes, I can backport changes from Debian that eliminate the apt-ftparchive bottleneck, but that will take some work.)
Medium	Implemented	Implemented	cd-bootloader	kamion	5	**Implemented.**

General			General	kamion		misc: Helped Tollef out with Flight 6. Fixed a couple of frequently-reported yaboot bugs and sorted out FAT/NTFS mount options, which were huge causes of annoyance for migrating users. Made all the uploads for updated Breezy CD images, though blocked on some archive issues. Set up Xubuntu CD images (apparently first time). next-week: Finish propagating keyboard selection to installed system. choose-mirror/apt-setup should be easy now that component packaging has been reorganised, so I'll do that next. Better hostname defaults. Fix reboot step. Chase up a few bits of work I've delegated. After that I think I'll be happy enough with Espresso's functional state for the Dapper beta release.
Meeting:						None listed.
keybuk						
High	Implemented	Implemented	hardware-activation	keybuk	5	**Implemented.**
High	Implemented	Implemented	udev-roadmap	keybuk	14	**Implemented.** many changes to the way we do root filesystem mounting this week; the new stuff is rather more streamlined and means we can do mount-by-uuid (ProbeForRootFilesystem) on everything except evms, LVM and md/RAID now. Now: Implemented. Frozen at current udev version, newer versions do include support for later kernels but at the price of reduced support for the one we're shipping with. Root filesystem mounting changed so that ProbeForRootFilesystem is possible for everything except evms, LVM and md/RAID. A few bugs after the change, that have been solved.
High	Implemented	Implemented	network-magic	keybuk	20	**Implemented.** Changes to network manager done, and it's been moved to main; Now: Implemented. Update to 0.6 along with wpa_supplicant and libnl has been done, people are reporting that they have working WPA support which seems to make them happy. Much of our changes were merged upstream in a useful way, so we are also able to ship VPN support. latest problem is that because it's running on the Live CD it means you can't configure a static IP, or bring up ppp, etc. because NM reverts whatever you do.
High	Implemented	Implemented	hardware-detection	keybuk		**Implemented.**
Medium	Implemented	Implemented	streamlined-boot	keybuk	10	**Implemented.**
Low	Implemented	Implemented	urgent-reboot-notification	keybuk		**Implemented.**
General			General	keybuk		last week: bugs, siretart and I made wpasupplicant identical in Debian and Ubuntu and all fluffy and stuff next week: bugs, nm bug day planned, ftp lessons with Kamion **Note from mdz: if there isn't already a "here's how to install NM with g-a-i" doc in the wiki, please talk to the doc**
Meeting:						None listed.
Kinnison						
High	Implemented	Implemented	power-management-configuration	dsilvers	?	**Implemented** - I have integrated a lot of upstream changes and I have gotten upstream to take on a significant portion of the changes I made locally. Upstream continues to take an active interest in taking on our patches and helping with our bugs.(PowerManagementInterface): Rewound a bunch of partial patches to prepare 2.14.0-0ubuntu1 upload for after flight-6. Went through even more bugmail. Scouring of CVS to get a list of changesets for upstream to produce a 2.14.1 release for us.
General			General	dsilvers		gnome-power-manager (PowerManagementInterface): Uploaded 2.14.0-0ubuntu1 after flight6 was done, continued reading CVS changelogs and diffs. launchpad: provided mvo with a way to test the signed dist-upgrader stuff. Worked out how to fix the d-i handling to support pockets. Wrote tests for uploader for from a while back. gparted: tried to work out why with the installer-mode patch the new gparted breaks. Not yet worked it out. otherwise: Solving bugs which mdz throws at me mostly. Many are difficult to reproduce. I have a reasonable amount of these on the go. publisher: Investigated where the time is taken in the publisher and wrote detailed report for kiko and mdz. lp-ongoing: Enhance the test set I added to exercise more of the uploader's decision paths. Merge the sign dist-upgrader stuff and the d-i pocket support. Possibly look at the publisher from a speedup PoV depending on priorities. distro-ongoing: gparted ui bug; continue squashing the set of random bugs. Review the bugs open on g-p-m, try to get enough for upstream to do g-p-m 2.14.1 for us. Again, I'll try and do some espresso UI stuff if I can.
Meeting:						None listed.
krstic						**Not present, goal deferred.**
Proposed	Deferred	Deferred	hardware-testing-catalog	krstic	?	split off as hardware-testing-catalogue mdy & BenC are handing community-server-hardware-testing etc. This goal is deferred to Dapper+1.
Meeting:						None listed.
lathiat						**Not present – goal deferred.**
High	Deferred	Deferred	zeroconf	lathiat	?	As per mdz this goal is deferred, as we have unresolved issues and it's too late to do much about it.
Meeting:						None listed.
mdz						

Essential	Implemented	Implemented	dapper-release-process	mdz		**Implemented.**
Meeting:						None listed.
Mithrandir						**Not present , on leave – e-mail update received.**
High	Implemented	Implemented	media-integrity-check	tfheen	2	**Implemented.**
High	Deferred	Deferred	network-authentication	tfheen	30	Note from mdz: let's defer network-authentication officially from dapper goals.
High	Implemented	Implemented	simplified-livecd	tfheen	?	**Implemented.**
Medium	Implemented	Implemented	probe-for-root-filesystem	tfheen	10	**Implemented.**
Medium	Implemented	Implemented	live-cd-performance	tfheen	?	**Implemented.**
Medium	Implemented	Implemented	livecd-unionfs	tfheen	1	**Implemented.**
Medium	Implemented	Implemented	one-true-path	tfheen	3	**Implemented.**
Medium	Deferred	Deferred	openoffice-amd64	tfheen	?	Was: No progressDecision taken to defer this to Dapper+1
Low	Implemented	Implemented	livecd-squashfs	tfheen	?	**Implemented.**
General			General	Mithrandir		misc: released flight-6, tested i2o support in the installer, bug triage, vacation
						next week: more vacation, espresso hacking, bug triage
						blocked on: nothing in particular
						Not a very exciting update, but flight-6 took most of my time and energy last week.
Meeting:						None listed.
mvo						
High	Awaiting Deployment	Awaiting Deployment	release-upgrades	mvo	10	**It is essentially complete**, but we need to continue to track its deployment in production as far as infrastructure. **Note from mdz: Please proceed with seeding/promotion/metapackages and then update it to implemented** Work continued on this Including some fixes and a local auto-test environment.worked on the lp people on getting the magic into the archive (done). To be completed next week. dist-upgrade tool backportage to breezy is blocked on a soyuz bug (filed)
High	Implemented	Implemented	third-party-packages	mvo	10	**Implemented**, the problem is we don't really have any that are available in a external repository. updated and added gstreamer desktop files, uploaded new gdebi (mostly cosmetic fixes)
Medium	Implemented	Implemented	unattended-package-upgrades	mvo	3	Implemented.
Medium	Implemented	Implemented	default-apt-sources	mvo	?	Was:- default-apt-sources: * worked on the per-queue-failure code, decided to do something simpler. Spec to be progressed to approved. Now: implemented as described in http://wiki.ubuntu.com/DefaultAptSources (apt/aptitude/synaptic uploaded to dapper)
General			General	mvo		Did: - bug triage/fixes - dist-upgrader authentication sorted (thanks to Daniel Silverstone for his help), bugfixing in u-m - auto-dist-upgrade test setup runing on my test i386 - gnome-app-install dekstop file updates, better runtime duplicates detection, fixing - update-manager dist-upgrade from dapper->dapper+1 planing, sabdfl suggested to just skip it - update-manager breezy backport finished, waits for #36022 - update-notifier fixes (and a bad upload), better debugging support for hook problems Will do: - more bugfixing/bug triage (still lacking behind) - hopefully upload update-manager into breezy-updates - language-selector-qt missing langpack detection Blocked: - python-vte moving to breezy-updates/main: #36022 - sysadmin setup for the auto-dist-upgrade
Meeting:						None listed.
ogra						
High	Implemented	Implemented	thinclient-faster-startup	ogra	?	**Implemented.**

Medium	Implemented	Implemented	thin-client-memory-usage	ogra	5	No way to make nbd-server create swap files on the fly before feature freeze, started working on a patch to have it ready for dapper+1, apart from that (and possible improvements through including dash needs more testing for dapper+1) **The rest is implemented**. to not loose the nbd requirements, I created a new spec: `https://wiki.ubuntu.com/FullyAutomaticSwapServer`
Medium	Implemented	Implemented	thinclient-sound	ogra / jam	2	**Implemented.**
Medium	Deferred	Deferred	thinclient-local-devices	ijackson / ogra ?	?	Deferred to Dapper +1.
Medium	Implemented	Implemented	screen-saver	ogra	?	**Implemented.**
Medium	Implemented	Implemented	screensaver-default-image	ogra	?	**Implemented.** xscreensaver package work done, jdub wants to do the artwork related stuff . The development is complete but artwork is still pending (due by UI freeze, coordinate with silbs/jdub/etc.)
General			General	ogra		* general: flight 6, more edubuntu-artwork work, bughunt (the "screensaver activates regardless of user input" seems fixed, someone who can reproduce the flickering is working on a patch (these were my two worst bugs)) * next-week: more bughunt, edubuntu and ltsp documentation, waiting for some pre-final artwork from the design company for edubuntu-artwork to finish the package, do some tests to find out if separate langpacks for kdeedu probably solve the space problem on the edubuntu CD * additionally: due to some big bad changes in life, my GF and i will have to give up the house move to the other side of the country and have to solve a lot of additional stuff. so please bear with me the next time, my RL will get very very weird and dizzy for some months...
Meeting:						**jdub to provide screen-saver artwork.**
pitti						
High	Implemented	Implemented	belocs-locales	pitti	2	**Implemented.**
Medium	Deferred	Deferred	automatic-printer-conf	pitti	2	Was: requires a fair amount of new code and work, I'd rather make cups less buggy than add hal-cups-utils and try to integrate it; it would probably require sb who knows more about gnome than me anyway. Hopefully somebody comes along and gives gnome-cups-manager some love. Now: automatic-printer-conf: no blocks, no time, deferred to dapper+1.
Medium	Implemented	Implemented	gstreamer-audio-backend	pitti	3	**Implemented** everything on our side; the libgnome audio events issue is still left, but that's an upstream thing .
Medium	Implemented	Implemented	language-pack-vs-support	pitti	?	**Implemented.**
Medium	Implemented	Implemented	langpacks-desktopfiles	pitti / zyga	5	**Implemented.** fixed all non-KDE packages which needed manual updating, spec completed; PLAN: discuss the stuff with gnome/fd.o upstream.
Medium	Deferred	Deferred	firewall	pitti	?	Was: long-outstanding bounty proposal; no news from carstenh for quite a while now. Now: deferred to Dapper +1. This is now being discussed between Carsten and Krishna. Now: DONE: almost finished negotiating the bounty with carstenh, with 95% probability this will be deferred to dapper+1; To be delivered by 1 May 2006. DONE: negotiated bounty with carstenh, approved by mdz; target date: May 1st; no blocks any more
General			General	pitti		reducing-duplication: no progress since last week general stuff done this week: * security updates * bug triage and bug fixing * started to attack the cups mess; 1.2rc1 doesn't work at all for us; if KDE gets ported RSN, I'll stick with our svn snapshot and merge upstream bug fixes; if not, I seriously consider reverting to 1.1.23 (discussion welcome) * langpacks: built first test version with Rosetta data, get rosetta+buildd merging/import mostly automated now, automatically create statistics and daily report; rosetta is still missing about 2/3 of all translations (a huge part of that is KDE), but the exported ones look good now plan for next week: * new langpacks for dapper (with Rosetta love) * get cupsys into a better shape * bugs, bugs, bugs * look at gs with iwj under the heading of reducing-duplication
Meeting:						None listed.
Riddell						
High	Implemented	Implemented	kubuntu-roadmap-dapper	jr	80	**Implemented** - flight 4 released, new kubuntu-default-settings with a lot of tweaks, kde 3.5.2, qt 3.3.6, amarok 1.3.9 uploaded
High	Implemented	Implemented	simplify-kde	jr	?	**Implemented.**
High	Approved	Good progress	kubuntu-express	jr	25	Was: kde espresso syncing with gtk frontend Now: KDE Espresso, getting quite usable now
Medium	Approved	Slow progress	kubuntu-documentation	jr	10	Was:documentation seems to be on track for docs freeze next month Now: there's been some god activity on the desktop guide, but I should upload an updated version soon
Medium	Implemented	Implemented	kubuntu-system-tools	jr	10	**Implemented.** new guidance with bug fixes tested and uploaded

Medium	Implemented	Implemented	kubuntu-package-manager	jr	20	This spec is is implemented, however the .deb installer part is deferred.
Low	Deferred	Deferred	langpacks-desktopfiles-kde	jr	?	Was: investigated for KDE, looks possible if careful to avoid kconfig/klocale loop. Now: new pending review, likely aim for dapper + 1. Deferred as can not be completed in time for dapper.
Proposed	Deferred	Deferred	kubuntu-launchpad-integration	jr	3	Was: No update given Now: moved target to dapper + 1. Deferred
General			General	Riddell		also: flight 6, bugfixes, e-mailing with Gael Duval, kubuntu-docs update, knetworkmanager testing next week: KDE Espresso
Meeting:						None listed.
seb128						
Essential	Implemented	Implemented	gdm-keyboard-layout	seb128		**Implemented.**
Essential	Approved	Good progress	dapper-desktop-plan	seb128	10	Summary of the changes for it (using https://wiki.ubuntu.com/DapperDesktopPlan): * GDM "We are going to:" points are done. To note: - the icons are broken by a gnome-icon-theme change but I've a fix pending after discussion with upstream, I'll upload today. * network-applet vs. Network Manager: network-manager has not been pushed to the desktop * "Log Out" is not easy enough to find: that change has been made but (happens only for new installations sincethat's user configuration) * The session dialog need to be reworked: the new dialog has been made. It's called from the panel applet. I'll fix the panel menu to have only one item and calling that dialog today. * Workspace switcher: change has been uploaded * battstat applet or gnome-power-manager: that point is about a new icon. * update notifier: that has been done by mvo * "Add to Panel" dialog: The changes have been made out of the new icons for the menu bar and main menu * applets: We assigned bugs we got about that but didn't do a applet by applet review * Top panel icons: The changes have been made. There was some discussions from the documentation team about making yelp discoverable but keeping a panel icon for that is probably not the way to go, launcher are for frequently used launchers, not for something you want to notice on first use only * contact-lookup-applet Same, that's not a part of the desktop but should be easy to fix. Now: GNOME 2.13.92, updated a bunch of GNOME packages to ship a -dbg, session dialog change for "session lock" uploaded.
High	Implemented	Implemented	hide-admin-tools-to-users	seb128	2	**Implemented.**
High	Implemented	Implemented	menus-revised	seb128	2	**Implemented** (may adjust some stuff according to users comments though) - I've reactivated the window-properties capplet as discussed
High	Implemented	Implemented	video-playback	seb128	5	**Implemented**, mail for testing has been send to the ubuntu-devel-announce list (thanks Daniel)
Medium	Implemented	Implemented	faster-gnome-startup	seb128	3	**Implemented** (new fontconfig with mmap cache mentionned as an option is still beeing worked upstream so probably not for dapper, GTK icon cache specification has issues will be sorted for Debian but probably not for dapper neither, others points are done and work correctly)
Medium	Deferred	Deferred	rhythmbox-ipod	seb128	5	Was: gstreamer0.10: updated rhythmbox. Now: gstreamer0.10: desktop and seeds updated for gst0.10, gst0.8 can be demoted to universe. This goal is low priority, will probably not happen for dapper, too many stuff to do, upstream didn't work on it, and I will probably not manage to free a week or so to code on that. Deferred.
General			General	seb128		This week: load of bug triage (bug mails backlog almost clean now), started really working at fixing some bugs, packaged gaim 2.0beta3 (package on people.ubuntu.com), did some bug fixing and package patching Next week: GNOME 2.14.1, will update wiki desktop TODO page with bugs and tasks that would be nice for contributors, keep catching up with coming bug mails and patching https://wiki.ubuntu.com/DesktopTeam/TODO
Meeting:						None listed.
sivan						**Not present – no e-mail update received.**
Medium	Approved	Good progress	home-user-backup	sivan	10	Was: had some good progress the last week, I can see the end now, approxmt. in one week from now or less. backend are are ready, including burn and isobuilding, all left is glade and PyGTK UI hacking to finish. (including supoort for multisession for differential backups) (a package will get uploaded soon to universe , so you could see where this is going) Now: HomeUserBackup is very close to finishing now (approx 2-3 days away if my gf let me work during the weekend) this will include backing up to CD, and restoring Now: * Done - Archive creation, catalog creation. - Creation of master and differential archives. - 99% of GUI integration. (only several few bits are missing) - Numerous bugfixes on the way.

General	General	sivan	home-user-back-up: * Todo
			  - Backup: Just connect between CDBurner.py from the backend and the GUI, to burn each ISO in it's turn and pause between them with an user question to put blank / multi session cd into the burner.
			  - Resotre: respond to the already propogated slice change message form backend/BackupEngine.restore(). Will upload as soon as those bits are finished.
			DB2 Packages: * Done:
			  - Worked with Martin to make sure the packages present the same behavior as expected by DB2 users. Helped him with evaluating the initial debianization and with some bug fixes.
			  - Put Martin's packages into all of the sanity checks in the official IBM DB2 test suite. Test result: SUCCESS! (log has been emailed to pitti)
			* Todo:
			  - Complete Product Verification Program (PVP), basically a stress, concurency and burndown testing of the DB2 installation on dapper. For this I may require hardware which I don't have, an i386 machine with 2GB ram and about 110GB HD space and dual processors >= 500Mhz (official IBM testing requirements)
			Could such a machine be set up for remote access if I fail to allocate one myself?
			  - Find out with Boris Bialek if we need to have an updated test suite for DB2Express-C, my educated guess is not, but will make sure about this.
			  - Repeat the above for Breezy as well, as I found out it's not officially supporte yet and not in IBM's list as such.

Meeting:			None listed.
General:			
General	General Comments	All	* Check your Priorities, Statuses, Estimated Developer Days and Expectation of Delivery in LP each week and keep them up to date. * Remember to mention if actions listed here one week, such as discussions etc, have been completed the next week. *** Note the decision to delay dapper by 6-weeks has been taken. New planned release date 1 June 2006.**
Meeting:			None listed.
