

The following are options available made to the specifications and requirements of the client:

- Maintenance including monthly on-site visits and remote access to check usage, functionality and log file uploading.
- Content management – uploading, changing or updating of content.
- Monthly, bi-annual and/or annual reports on usage.

The Freedom Toaster is set to revolutionise the way South Africans share information. It has the potential to change the way we interact with others and the world around us. More importantly, it will forever change the way we share information.

## 'The Freedom Toaster'

Information has always been the driving force behind gaining wealth and prosperity. It is essential to supply free information; to make it available at the touch of a fingertip to the masses.

The Freedom Toaster is a distribution platform that allows massive amounts of information and content from a variety of sources to become available to the end user without the costly infrastructure that is usually required.

Quite simply, the Freedom Toaster is much like a vending machine with free access to digital content.

"... (The Freedom Toaster is) such a good idea I wish I could take credit for it" Mark Shuttleworth – innovator and investor

## Where is the true value in using a Freedom Toaster or a customised kiosk?

- Any digital content from FREE open source software to open content to just about anything can be easily distributed. Most importantly it enables information distribution to those who cannot afford costly licensed equivalents.
- A customised branded solution can hold an organisations content and information, alleviating high costs associated with content distribution and information availability.
- With ANY and all content held on a local hard drive, the user and client are able to save on prohibitively high costs and time associated with downloading.
- The easy interface allows a user to navigate content and information by means of a touch screen and then "burn" chosen content onto a CD, DVD or USB flash drive making the cost to any information or content negligible.
- Support services allow the content and information to be updated remotely or locally as often as a client requires.

## IMAGINE - the possibilities in ...

- Downloading free software to run your computer.
- Copying a free pack of documents on how to start a business with templates of business plans, spreadsheets for financials and all the set up documents to get started.
- Learning about good health and how to maintain a healthy body.
- Receiving a copy of school or university curriculum with lecture notes and past examination papers as well as shopping for free music.
- Distributing your companies product catalogues and company information in your reception area.

## The Freedom Toaster installation and back-up service package

The following services are included in our installation service package to you:

- A robust, secure and modern "kiosk" branded with your organisations logo utilising a touch screen user interface and DVD, CD and USB content delivery system.
- User interface that is easy to access with simple, clear and logical navigation for the end user.
- Comprehensive warranties of up to ten years depending on each part of the kiosk.
- Delivery to site and installation.
